

EZTee Lines for Driving Ranges.

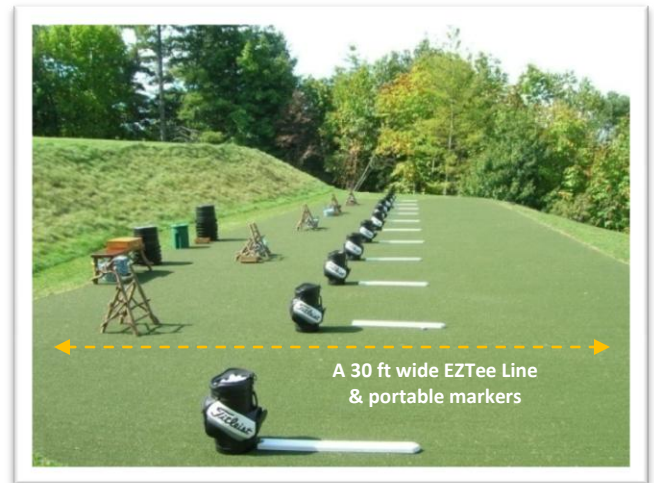

We take this opportunity to introduce to you an Artificial Turf, which would be ideal for your **Golf Range**. As, in the limited time afforded at the driving ranges, it's quite impossible to grow grass, and compact the earth below it, Golf Ranges over the world are resorting to the next best alternative to provide their members the best experience possible. The game has since evolved from Golf mats to EZTee Lines and Golf Club's also realized that tee lines rejuvenates and re-energise the look & feel of their practice facilities and made it more appealing to members & sponsors alike. Over a hundred of the top clubs in the US have embraced our EZTee lines as they realize that they need to constantly better the playing and practice experience & satisfy their members and guests.

Tees & Driving Range Solutions

Practice makes perfect. Designed specifically for driving ranges, Tee Line apart from delivering consistent performance, **gives your natural grass hitting area, enough time to improve.** Tee Lines have earned rave reviews at thousands of clubs since 2002 and are the **chosen provider for 17 U.S. Open host courses and dozens of others among the top 100 worldwide.**

Our satisfied customers list is enough proof to ensure that your investment is indeed safe with our product. Our Tee Line products have been endorsed by **David Leadbetter, World Renowned Golf Instructor/Teaching Professional and used at David Leadbetter Academies and at Jim McLean, World Renowned Teaching Professional/Instructor, Jim McLean Golf Schools.** Our satisfied customers are the reason we have retained and expanded our

customer base and this is being brought to the subcontinent for the first time by INVISION. **Why buy old fashioned mats which are inferior or less satisfactory, when you can get the best product (EZTee) in the world at the same price.**

EzTee can be installed over **natural base or concrete**, and is appropriate for tee lines, hitting mats, tee boxes, and any practice facility. **This innovative turf system gives your tee lines the look and feel of the best professional grounds.** In addition, permits continuous use, **reducing/eliminating the need to relocate and reseed driving range areas.**

The Advantages.

- Holds a real tee of any size.
- Allows for a true natural swing
- **Provides a divot feel with no club bounce as felt with the cushioned rubber base mats.**
- Used by PGA professionals, teachers, tour players, and numerous top rated facilities
- Reduces chances of injury to wrist and elbow.
- Allows all year round play and practice.
- Saves your money and gives your grass time to heal.
- **Can last 3-4 times longer than traditional mats making it much cheaper in the long run.**
- **Maintenance free & maximizes usage of surface area.**
- **The Turf is much taller and compact so a golfer can actually swing down and through the ball for near realistic practice**
- **Allows a regular change of the hitting position to increase the life of the turf.**

This is the top end surface available. Polypropylene and nylon blend allows for a fuller fiber with soft feel through impact. This is used by many of the top 100 golf courses in the US. This product DOES NOT replace the real grass, but it gives the grass time to heal properly. This can be installed on any firm compacted base or on concrete which will extend the life of the turf.

Commonly reported problems of the conventional Range Mats with rubber cushioning.

- Rubber cushioned mats are very forgiving for Fat shots & Duffs go unpunished and can result in a false sense of success for average golfers who have problems when on the course.
- ***Synthetic Turf International has developed EZTee, which eliminate the bounce & recoil of rubber bases and provides a more natural feel.***
- Short game practice with wedges is a possibility with EZTee when, in the practice areas, the “softer sanded surface” has not had enough time for compaction.
- ***These surfaces allow you to regulate use of your natural surfaces with a near natural feel alternative thus allowing adequate time for proper maintenance and correct compaction levels.***

We are sure it will change the way your practice range looks and feels, at the same time providing the golfers practicing at your range, a safer, more realistic and closer to natural feel surface.

Yours faithfully,

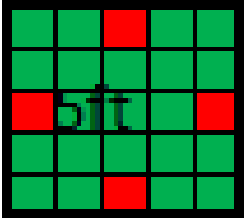

P.S.Rawat

Tee Lines when used in the right quantities, can work out from 2.5 / 4.5 times more cost effective than regular mats. Tee Lines also make the area beautiful

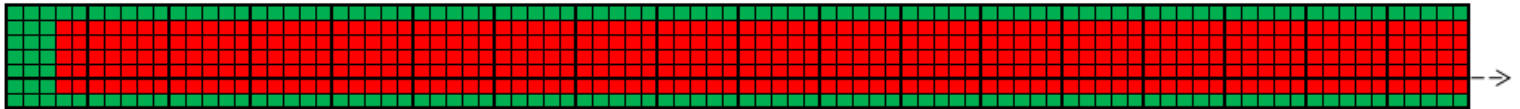

Tee Lines give you more in every way.

Approximate Cost effective analysis

In a 5ft x 5ft traditional mat, only the spot being hit on, wears off. Rotating the mat 4 times thus allows only 16% usage of the entire 25 square ft. The balance 84% of the mat that you paid for is unutilised and wasted expenditure.

When you use a Tee line, 2.5 more times of the turf is usable and with greater widths, upto 4 times more is used. Since the sqft cost is the same, it works out cheaper as it lasts much much longer and all the while giving you a better experience.

Illustrated above is a 7ft wide Tee Line. The red denoting the hitting areas which shows how much more of the surface area is gainfully used making it better utilisation of your investment. Choice of width should depend purely on the amount of use anticipated.

Our EZTee Lines are custom manufactured to suit your requirement

The EZTee® Hybrid Plus+ features a non-infilled high grade polypropylene/nylon blended yarn system designed for heavy traffic tee lines, hitting mats, and extended use golf ranges. This product holds a real tee and allows players to hit all clubs, from a wedge to a driver and is used by many of the top golf courses around the world. EZTee® Hybrid Plus+ does not replace your natural grass, but instead gives the grass time to heal properly. When will you Experience A Greener World and a better golf facility?
